Choose one of your favorite websites and identify 5 different HTML elements used on the website. Make sure to include the URL in your submission.

I chose Furball Farm Cat Sanctuary, and found these 5 elements using inspect on the site:

<h3></h3>bold type print used on title, FURBALL FARM CAT SANCTUARY

<img src> image next to morning chores

<a><a/>a hyperlink Home

<p></p> the paragraph under The Dr Beverly Stephenson Spay/neuter program.

 used for list of morning, afternoon and night chores.

What is a highlight of what you have learned this week?

The highlight of learning about html is how satisfying it is to be able to produce something tangible like a website using simple opening and closing tags. I love the trick of shift-!-enter to create the boiler plate code for the html page. HTML (so far, at least) comes with straight forward rules: it almost always needs an open and a close tag. The tags are identifiable which makes it easier to apply. For example, the paragraph tag is <p>, the title tag is <title> <h1> for heading.
